**Product series:** Modified Nylon

**Brand:** POLGPAMR

**Product technology Characteristic:**

POLGPAMR uses home-made or imported PA6 and PA66 as carrier and adds in additive agents such as glass fiber enhancer, anti-aging agent heat-resistant agent and plasticizer, to create a new modified nylon material with advanced production equipment and unique extrusion technique and under the common reaction of the home developed compatibilizer.

**Usage:**

The products are mainly applied to the heat-resistant and wear-resistant parts of automobile as well as the heat-resistant and wear-resistant parts in the fields of electrical appliances, electronics, mining, and oil fields. 10 Products have been certified as modified plastics for automobiles.
